

## **White-throat song: Recording protocol**

### **1. Find a singing white-throated sparrow**

- Try to make ensure you haven't already recorded this one

### **2. State your location, date, and time on the recording**

- A backup in case something happens to the physical notes

### **3. Record at least 10 good quality songs**

- With minimal overlapping background noise
- Try to ensure that at least 5 of these songs are full songs, not simply introductory notes

### **4. State your location, date, and time on the recording (Again!)**

- A another backup

### **5. Note your location, date, and time on paper/phone**

- GPS location is excellent if you have it
